Marlene H. Dortch Secretary Federal Communications Commission 445 Twelfth Street SW Washington, DC 20554

> Re: Terrestrial Use of the 2473-2495 MHz Band for Low-Power Mobile Broadband Networks; Amendment to Rules for the Ancillary Terrestrial Component of Mobile Satellite Service Systems, IP Docket No. 13-213, RM-11685

Dear Ms. Dortch:

On June 16, 2016, I spoke by phone with Daudeline Meme of Commissioner Mignon Clyburn's office. On June 17, 2016, I left a voicemail for Erin McGrath of Commissioner O'Rielly's office. In both instances, I raised issues consistent with our previous filing in the above-captioned proceeding.

In particular, I reiterated that companies offer products and services that utilize the 2.4 GHz band, particularly for use by Wi-Fi, Bluetooth, and other unlicensed connectivity options. Given this, ITI and its member companies have significant concern with any proposed use of the 2.4 GHz band that would potentially limit or adversely affect these far reaching applications and the benefits derived from them. Many ITI member companies, have concerns that Globalstar's proposed terrestrial low-power service (TLPS) would adversely affect these uses of the band. As ITI noted in its original filing, there is significant evidence in the record that this would be the case both for Bluetooth and Wi-Fi. At a minimum, we urge further testing to determine what the impact would be on the multitude of unlicensed uses in the 2.4 GHz band that would be affected, and assess how to best adopt safeguards to protect consumers.

This notice is being filed in the above-referenced dockets for inclusion in the public record. Please contact me should you have any questions.

Respectfully.

J. Vince Jesaitis

Vice President, Government Affairs

ITI - Information Technology Industry Council

CC: Daudeline Meme Erin McGrath (via electronic mail)
